AgraPro™: The Ultimate Soil and Crop Health Technology

WHAT IS AgraPro™?

AgraPro™ is a powerful bio-stimulant and soil amendment in one. This is a one-of-a-kind peat extract made from 10,000 year old active and complex naturally occurring materials. What differentiates this product from everything else on the market is the patented extraction process used to recover all of the natural substances in their most beneficial form. The result is a formula with greater power than simply the sum of its parts. AgraPro™ is available as a liquid formulation.

WHY IS AgraPro™ A UNIQUE FORMULATION?

With AgraPro™, all of the substances are still present in the peat at their natural, most powerful state when collected for processing.

- AgraPro™ peat extract is the end result of microbial degradation of once living natural material.
- In peat, the complex compounds are present in their natural, most powerful state.
- The patented extraction process successfully captures a more complete spectrum of beneficial substances, yielding a formula in which the whole has been proven to be greater than the sum of its parts.
- This patented process is also able to produce a very high ratio of fulvic acid per unit, which is critical in the transport of the greatest amount of nutrients through root and leaf pores and into microbial cells.

AgraPro™: THE ULTIMATE SOIL & CROP HEALTH TECHNOLOGY

- Enhances fertilizer & water efficiency
- Increases crop turgidity
- Enhances soil nutrient retention & makes nutrients more available to the crop
- Dramatically reduces potential of root loss under stressful conditions

Meets NOP standards for organic crop production
